

Daily Briefing — Thursday, July 9, 2026

Generated 08:54 UTC

Watch list

- Model Ops Weekly published a practical guide to evaluating agent runs before they reach users; save the checklist for the next product review. (Model Ops Weekly) — [source](#)
- The Design Systems feed shared a compact pattern for mobile report cards that keeps source links visible without cluttering the page. (Design Systems Feed) — [source](#)
- A customer research note flagged that users trust short daily summaries more when missing integrations are called out plainly. (Research Notes) — [source](#)

News updates

- A major AI platform announced lower-cost long-context inference, making daily monitoring workflows cheaper to run for small teams. (X scan) — [source](#)
- Several security researchers are warning teams to rotate exposed automation tokens after a popular browser extension leak. (X scan) — [source](#)
- New public benchmarks suggest lightweight local models are improving at summarization, but still lag larger hosted models on source selection. (X scan) — [source](#)

What We Worked on Yesterday

Daily Briefing Template

Generated the mobile PDF flow, added clear setup status messages, and verified that the script prints a MEDIA path only after the PDF exists.

Client Portal Cleanup

Simplified the onboarding checklist, tightened the success-state copy, and moved sensitive integration details into local-only configuration.

Website Updates

Prepared a cleaner recurring-task card so visitors can understand what the daily report delivers before asking their agent to install it.

Calendar

- 09:00 — Planning check-in: choose today's top implementation target and confirm blockers.
- 11:30 — Client demo prep: bring the latest PDF sample and note any integrations that remain unconfigured.
- 15:00 — Follow-up window: send decisions, update the task list, and archive the day's briefing.
